

Greencast has forged ties with Singapore Green Building Council to connect with and contribute to the green building movement

SINGAPORE, 31st July 2015 — Greencast, the trusted lightweight precast concrete wall manufacturer announced today that it has joined the Singapore Green Building Council (SGBC) to support the positive development of achieving a world-class and sustainable built environment in Singapore.

As a public-private partnership, SGBC is set up to propel the Singapore building and construction industry towards environmental sustainability. Since its inception in 2009, SGBC has grown to become a leading voice for the green movement in Singapore. It is poised to play an even greater role in environmental sustainability of buildings as Singapore transforms into an eminent green hub in the Asia-Pacific region. SGBC counts many like-minded distinguished architects, energy consultants and engineers from well-established companies as well as green technology specialists as its members.

“We are delighted to welcome Greencast into the SGBC family,” said Mr Chia Ngiang Hong, President, SGBC. “As a company with a keen onus on environmental sustainability, Greencast is very much aligned with the core values of SGBC, and we look forward to working together with Greencast to advance the green building agenda.”

Greencast Compac™ Green Wall technology has been the pioneer to use recycled concrete aggregates into the production of the patented wall system. The patented technology has been contributing to the construction industry’s movement towards “Zero Building Waste”. Goodwood Residence project by GuocoLand Limited was one of the many projects that was awarded the BCA Green Mark Platinum Award for being the pioneer in using the Compac™ Green Wall technology to reuse the materials from their old builds into their new buildings.

“In the near future, Green will be the New Normal,” commented Alvin Hong, EVP, Business Development of Greencast. “We are glad to be part of the green initiative and do hope to contribute more for our future generation.”

About Singapore Green Building Council

Established in 2009, the Singapore Green Building Council (SGBC) champions efficient green building design, practices and technologies that go toward environmental sustainability in the building and construction industry.

SGBC administers the Singapore Green Building Product & Services labelling schemes, setting standards and benchmarks for green building products in Singapore and the region.

As an Established Member of the World Green Building Council, SGBC is also part of a wide global network of green building councils in more than a hundred countries.
